SUBJECT: Hampstead – Johnson & Johnson Assoc., Inc., 130 Route 111, Nondomestic Discharge Registration (DES# 200001038)

Dear Mr. Bean:

The Department of Environmental Services (DES) has reviewed your Application for Nondomestic Wastewater Discharge Registration submitted for the discharge of nondomestic wastewater from a boiler and drinking water treatment system. The Application meets the regulatory requirements of Env-Ws 1500, *Groundwater Discharge Permit and Registration Rules*.

The following conditions apply to owners of facilities which discharge nondomestic wastewater:

1. No nondomestic discharge other than that which has been approved by DES shall occur at this facility without written approval from DES. This registration is for wastewater generated by boiler blow down and water treatment backwash wastewater only. Maximum discharge proposed is 120 gallons per day to a dry well.
2. If requested by DES, the facility owner shall perform sampling and laboratory analysis.
3. The facility owner/operator shall be responsible for ensuring that no discharge from this facility shall contain a regulated contaminant. "A *Regulated contaminant* as defined in New Hampshire's Revised Statutes Annotated RSA 485-C:2, XIII, means *Any physical, chemical, biological, radiological substance or other matter, other than naturally occurring substances at naturally occurring levels in water, which adversely affects human health or the environment.*"
4. The facility owner shall notify DES if the character of the discharge changes, or if the discharge/use permanently ceases at the facility or if the facility and/or property are transferred. Notification shall be in writing within 90 days of discharge cessation, operational changes, facility or property transfer.

If you have any additional questions or comments concerning the registration please contact me at 271-2858 or by e-mail at mlocker@des.state.nh.us

Sincerely,

Mitchell D. Locker
